

Woody

**The robust swivel chair for kids
with 3D mechanism...**

NEW!

... for an ergonomic dynamic sitting
available as of mid of July 2011

For a dynamic and ergonomic sitting

The 3D luffing mechanism supports the naturally dynamic movements of the pelvis in all 3 dimensions, to the front, the back and to the side.

The seat shell has been ergonomically shaped and encourages healthy sitting from the first years in school.

Robust and premium

The seat shell is made of imperishable beech wood.

A five star foot base of resilient steel makes the Woody chair stable and safe against tilting over.

Thanks to a gas lift spring to adjust the height is easy and step less.
